

Apr. 1962

The Numazu Plant's functions enhanced to establish an integrated production system for sensitized paper

A paper factory was completed in April 1960 in Numazu, Shizuoka Prefecture. Two years later, the plant was expanded by building facilities for manufacturing sensitized paper on the same premises, thereby establishing an integrated production system for sensitized paper that included the base paper manufacturing process—the first of its kind in the world.
